HEALTHFORE
Transforming Healthcare

HealthFore – Transforming Healthcare

HealthFore Technologies Limited is a global healthcare IT solutions and advisory services company. Our B2B and B2C IT solutions help hospital chains, diagnostic centers and public health enterprises realize superior clinical outcomes.

Our patient-centric healthcare solutions focus on wellness, preventive care and condition management. Our information and health advisory services ensure prompt diagnosis and treatment of diseases. We create mass awareness to improve the quality of life through self-care.

HealthFore's IT products and services are built on leading-edge technology. Our solutions increase productivity and boost revenue for healthcare providers through process automation, interoperability and collaboration. Significantly, our customized solutions enable world-class patient care and comply with healthcare regulations, while minimizing costs.

We increase the reach of healthcare by investing in R&D. Our team of doctors, radiologists, dentists, physiotherapists, nurses, hospital administrators, pharmacists, and technicians provide insights to develop innovative solutions and streamline healthcare. Our strategic relationships with Microsoft, Oracle, IBM, HP, and Barco are the backbone of our healthcare solutions.

About Our Customer

Emirates International Hospital is a Multispecialty hospital located in the city of Al Ain, United Arab Emirates. EIH Hospital and its town Centre polyclinic, EIPC, have gone "Live" with HealthFore's Magnum Hospital Information System.

Hospital stakeholders have cited the depth of functionalities, the user friendliness, the various modules available within the system to automate all known departments in the hospital and the lower Total cost of ownership (TCO) as the key selection criteria during evaluation of various HIS systems.

Emirates International hospital is the first private hospital in Abu Dhabi under HAAD jurisdiction which has GONE LIVE with a state of art, fully integrated HAAD compliant Hospital Information system.

The "GO-LIVE" comes after a 12 month development cycle and a 6 month implementation program that included the gargantuan task of incorporating regional requirements prescribed by the Health Authority of Abu Dhabi (HAAD). The solution had to comply with regional standards and regulations via XML based e-Claims, EMR's, E&M and DRG coding, e-Prescriptions, HAAD data and coding standards. The product went through multiple rounds of testing involving Functionality and performance, interoperability, Internationalization and Localization, usability, database, system integration, user acceptance and user training.

At EIH, Magnum Imaging seamlessly interfaces with third party HRMS and Payroll solutions, AGFA PACS, 3M products and laboratory equipment's.

The results are for all to see with EIH showing impressive patient registration statistics. The solution has enabled medical providers to make better decisions and diagnosis by providing a 360-degree view of a patient by fusing heterogeneous information such as patient history, prescriptions, diagnostic lab results etc. to create clean, complete patient profiles needed to provide effective patient care and streamline operations.
