HealthFore's Triumph at Africa Health 2014

Dear Partner,

Over the last few months HealthFore has expanded both in terms of its client base and through number of strategic client acquisitions. This corporate investment supports our aim to become a leading technology partner to healthcare IT worldwide.

HealthFore's presence in the Africa Market was endorsed by our participation in Africa Health 2014 (29th-31st May 2014), largest

healthcare event on the African continent in Johannesburg. Africa Health had healthcare organizations from around the world promoting their healthcare focused products and services.

HealthFore continues to drive its commitment to deliver best of class products to its customers and has successfully updated Magnum Infinity HIS. This important milestone for Magnum Infinity HIS is expected to provide a significant boost to the other ongoing projects of ours.

HealthFore's Magnum Infinity Hospital Information System (HIS), Radiology Information System (RIS) have been successfully chosen in enabling a centralized, web based, integrated Hospital Information System for Shell's healthcare facilities in Lagos and Port Harcourt, Nigeria and also by Anglo Arabian Healthcare across all their facilities in the UAE.

Thank you very much for your continuous support and we look forward to continuing our partnership.

Best Regards,

Malav Kapadia

HealthFore showcased its leading healthcare IT solutions at Africa Health 2014

HealthFore participated in Africa Health 2014 (29th-31st May 2014), largest healthcare event on the African continent in Johannesburg. Africa Health had healthcare organizations from around the world promoting their healthcare focused products and services.

Our most recent release- Web based Magnum Infinity HIS received a remarkable response at the event with well-known Healthcare providers across ME, Africa and IT majors appreciating the efforts that we have put in our world class HIS System, helping us compete with the Tier 1 products globally. Our Magnum Imaging (RIS-PACS) product too got a lot of appreciation due to its recent FDA approval and the development done on the Imaging front. Magnum Infinity HIS and Magnum Imaging are now being considered across leading hospitals in the region.

The event concluded with the signing of many strategic ventures and partnerships onsite, making Africa Health 2014 one of the most victorious events.

Infinity goes live at Pushpanjali Crosslay Hospital

Pushpanjali Crosslay Hospital (PCH) is a tertiary care, multi-specialty, 250 bedded hospital situated in Uttar Pradesh, India. The hospital has a facility designed to offer unparalleled spectrum of preventive, diagnostic and treatment alternatives to its patients with follow-up care in virtually all medical specialties. The hospital has well defined policies and processes.

PCH was earlier using InterSystems TrakCare, which is an international Healthcare Information System; along with Acuvana blood bank software and Prodigious back office to support them. Since Inter Systems wound up operations from India, PCH faced support issues and was looking at replacing its HIS system. PCH chose HealthFore's Infinity HIS to replace TrakCare with an understanding that features, workflows and functionalities of Trakcare will be provided in a phased manner.

HealthFore's Infinity Project Team studied the various workflows that were automated at the hospital using TrakCare with its interfaces and mapped them to functions and capabilities of Magnum Infinity Hospital Information System. After conducting user acceptance testing and various levels of trainings on the configured system, multiple parallel runs were conducted to mimic the go-live scenarios along with data migration.

After a thorough pre-go live preparation assessment by the project team, Pushpanjali Hospital finally went live on 4th May 2014 with 21 modules of Infinity namely Identity Management, Resource Scheduling, Ambulatory Care, Inpatient Care, Clinical Charting, Orders & Requests (CPOE), Nursing Management, Medication Management, Pharmacy, Clinical Laboratory, Clinical Imaging, Operating Room, Electronic Data Management System (EDMS),

Patient Accounting, Payer & Service Contracts, Payer Claims, Referral Management, Emergency Management, Daycare Management, Inventory Control and Information Reporting; along with interfaces with clinical laboratory analyzers, FUJI PACS, Acuvana Blood Bank, Prodigious back office (procurement, finance and fixed asset) and SMS gateway.

Magnum Infinity is running at the hospital since then. All workflows running prior on TrakCare are now being run on Infinity across departments and specialties. Onsite and offshore support is presently being provided to the hospital users.

HealthFore's solutions selected by Shell Nigeria Exploration and Production company Limited (SNEPCO)

HealthFore has been selected as a preferred partner in enabling a centralized, web based, integrated Hospital Information System for Shell's healthcare facilities in Lagos and Port Harcourt, Nigeria through Telnets NIG. Post the yearlong selection processes, HealthFore's solutions were selected by the Shell's team.

The mandate from SHELL was to partner with one of the experienced Healthcare automation vendors who could deliver a state of art Integrated Hospital Information System which can completely computerize its facilities in Port Harcourt and Lagos. These facilities are situated in the

residential area cater to the general health of Shell's employee's and their dependents. The system is planned to be deployed at a central data centre.

HealthFore's Magnum Infinity Hospital Information System (HIS), Radiology Information System (RIS) is planned for deployment. The project is expected to take 5-6 calendar months for deployment and is expected to go live end of 2014 with approximately 200-250 users accessing the system across the two sites.

HealthFore's Magnum Infinity gets thumbs up from Anglo Arabian Healthcare FZ LLC, UAE

We are pleased to announce that HealthFore's Infinity and Imaging solutions has been selected by Anglo Arabian Healthcare for enabling a centralized, purely web based, integrated Hospital Information System across all their facilities in the UAE.

The mandate from the AAH Management was to partner with one of the experienced Healthcare automation vendors who could deliver a state of art Integrated Hospital Information System which can completely automate its facilities across Sharjah and Ajman. The facilities under the AAH group are all brown field hospitals and have been providing patient care to general public for the last 15 years. Such a centralized deployment at a 'hosted data centre' would be the first of its kind in the region which shall enable a facility with complete automation including the clinical documentations and Integrations with insurance companies and TPA complying with the regional requirements.

The main frameworks being HealthFore's Magnum Infinity Hospital Information System (HIS), Picture Archiving Communication System (PACS) and Radiology Information System (RIS) and a portal for patient physician access, the project is expected to go live before the end of 2014 with approximately 800+ users accessing the system and over 1,00,000 patients being treated through the system.
